

ReTAGmobile

>> Labeling and Tagging Systems

Shelf tags, labels, tag audits; no matter what you call it, it is a time consuming and costly burden. With ReTAGmobile, you will save time and money, your tags will be current, accurate and at your finger tips. ReTAGmobile is a wireless labeling system that uses a portable handheld barcode terminal and a portable, wearable label printer. Through the use of Bluetooth wireless technology, the user simply scans an item UPC, or an existing shelf tag to generate a new tag instantly.

ReTAGmobile is the sure way to insure that tags are up to date, clean and most of all, accurate. Tags that are ordered from a central warehouse or office, often take days to arrive at the store, and then may not be applied for many more days. With ReTAGmobile, scan, print, apply. It's that simple. ReTAGmobile supports an unlimited number of label formats and styles and can print tags with or without SRP's. We offer tags in any shape, color and size, so matching your existing tags is never a problem.

Simply put, DataPort® is the difference. All Taylored Technologies products are designed to seamlessly integrate with our DataPort® Enterprise Communications Server, allowing our customers to realize the advantages of implementing new technologies without the expense and disturbance of having to replace their existing backend systems.

ReTAGmobile has the features you demand

- Unlimited label formats
- Portable
- Wireless
- Eliminate Waste
